

How to get the most out of **MeasureUp** through Microsoft Teams

If you already use Microsoft Teams and train with MeasureUp, then learn how this winning combination can help you.

MeasureUp training through Microsoft Teams can be as versatile as you need it to be. You can create as many channels in Teams as you'd like, and in these channels, you can decide to make only those MeasureUp practice tests that you want to use available. Let's see an example...

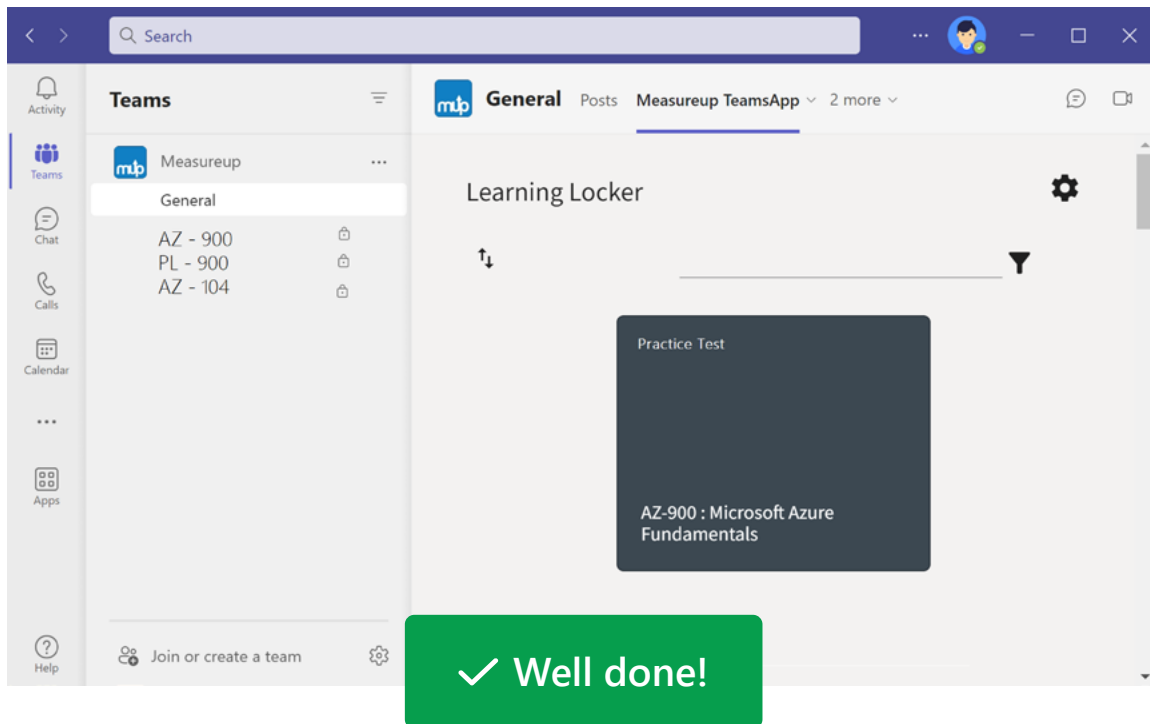

Years of experience in educational innovation

Our practice tests have been recognized for their innovative use of multiple question types, comprehensive explanations, complete coverage of exam objectives, the practice and evaluation delivery modes, and in-depth reporting. The MeasureUp practice test can be fully customized, so that you can focus on your specific learning needs.

Example: In just four simple steps

- 1 Create a private channel according to your organizational needs. This can be for example, a certification name, a group, or a class. In this case, we've chosen AZ-900.
- 2 Install the MeasureUp for Teams app within that channel. [More info](#)
- 3 Configure the license to only show the AZ-900 practice test in this channel. [More info](#)
- 4 Add all the users to be trained in the AZ-900 practice test to this channel.

You can create channels and activate the necessary practice tests by **certification, job role, technology, vendor, department, or by year** if you're a school or university. Or you can create a training channel that has all practice tests available.

Only **you** set the limits!!!

So good. Just MeasureUp!
